Adrenal Complex supplies specific nutrients that may be lacking in the diet and needed for optimum health. The high levels of vitamins and minerals aid in the synthesis of hormones and steroids for the body. Adrenal tissue supplementation stimulates and supports the adrenal gland by releasing active adrenal hormones into the system. These hormones help the body fight stress and control the metabolism of proteins, fats, and carbohydrates and stimulate the central nervous system.

Adrenal tissue is one of the internal secretion-producing hormone glands and consists of an outer and inner cortex and medulla. The cortex plays a role in the chemistry of the body which controls metabolism of proteins, fats, and carbohydrates, controls the concentration of sodium and potassium in body fluids, stimulates the central nervous system, and exerts metabolic effects on the liver and skeletal muscle. It is important for stimulation of the metabolic rate. Adrenal insufficiency may cause forms of arthritis, asthma, acute gout, stress and allergies, infection, poor healing, analgesia, hemolytic anemias, nephrotic syndrome, ulcerative colitis, hypotension, and depression.

Adrenal Complex is formulated for overall health.
Adrenal Complex contributes to normal development and growth, photochemistry of vision, normal reproduction and integrity of epithelial tissue, promotes healing, facilitates iron and calcium absorption, has antioxidant properties, and assists in the synthesis of neurotransmitters. It is also vital for RNA and fatty acid synthesis and essential for nerve cell transmission, fatty acid metabolism, formation of red blood cells in bone marrow, and synthesis of glycogen.

Adrenal health is essential for the body.
Adrenal Complex works directly in the transfer of hydrogen, which is necessary in the structure of co-enzyme A (Co A). It is essential for hemoglobin formation, for antibody response, production of steroids by the adrenal glands, for the synthesis of cholesterol, and stimulates and maintains the immune response. It is also essential for normal bone metabolism and many enzyme reactions.

Supports healing and helps fight stress.
Adrenal Complex is involved in lipid and cholesterol synthesis, normal function of the pancreas and production of sex hormones. It develops B lymphocytes which are vital for the humoral immune system. It has anti-inflammatory and anti-arthritic properties, and is used for hypercholesteremia, high uric acid levels, treatment of asthma and hay-fever, and is also used for chronic catarrh of the bladder.

Brings Balance
Adrenal Complex is involved in lipid and cholesterol synthesis, normal function of the pancreas and production of sex hormones. It develops B lymphocytes which are vital for the humoral immune system. It has anti-inflammatory and anti-arthritic properties, and is used for hypercholesteremia, high uric acid levels, treatment of asthma and hay-fever, and is also used for chronic catarrh of the bladder.

† New Zealand Freeze Dried Glandulars
Available in 60 & 180 count
Adrenal Complex supports the adrenal gland with adrenal tissue

Adrenal tissue supplementation stimulates and supports the adrenal gland by releasing active adrenal hormones into the system. The ingredients work together to strengthen the adrenal gland and nervous system. Adrenal Complex contains a lyophilized imported New Zealand adrenal tissue concentrate designed to provide the body with a high concentration of biologically active proteins, hormones, and nucleic acids that are in raw glandulars.

Bovine Adrenal & Spleen Tissue

Glandular tissues are rich sources of nutrients, enzymes and other factors that support specific gland-related metabolism and physiological function. When prepared with sufficient technical sophistication and sensitivity to their delicate nature, glandulars can retain a significant portion of their biological activity.

Glandular supplementation provides supplementation like no other combinations that help in tonifying specific organ tissues by providing the specific glandular nutrient combinations and the necessary enzymes for proper cellular health found only in glandulars.

Processing

MBi Nutraceuticals glandular products are produced from government inspected, range-grazed animals raised in New Zealand without the use of pesticides, hormones and antibiotics. Our glandulars are lyophilized (freeze-dried), which means the material is frozen, then subjected to a high vacuum that vaporizes moisture directly from the solid state, thereby maintaining their enzymatic vitality and nutritional potential.

No Additives

This product contains no sugar, starch, salt, preservatives, artificial colors, flavors or additives, and no corn, wheat, yeast, soy, or milk derivatives.

FDA Drug Manufacturing Standards

MBi Nutraceuticals operates its own FDA licensed Drug Manufacturing facility. Our standard operating procedures are based on “Current Good Manufacturing Practices” as defined by the Food and Drug Administration. MBi ensures the highest quality nutraceuticals by applying our drug manufacturing procedures to every nutritional, herbal, food, homeopathic, and personal care product we make.

Synergistic MBi Products
