C-3000 Complex helps to promote and replenish cells impaired by poor nutrition, age, and environmental stress in an easy to use powder. It supports the production of collagen, necessary for stable cardiovascular functions, helps build new, healthy cells and promote healthy immune function.

A favorite nutritional supplement it aids in preventing the common cold and reducing the risk of cancer. This vitamin also helps reduce both the physical and psychological effects of stress.

Since the human body does not produce vitamin C, all of this important nutrient’s requirements must be obtained through our diets, which are frequently deficient in vitamins. Lifestyle factors such as smoking, environmental pollutants, and food-processing techniques can impact the level of vitamin C in your body. In addition, vitamin C is not stored in the body, so it must be replaced daily. C-3000 Complex powder makes meeting your vitamin C needs easy.

**Vitamin C is widely known for benefiting the immune system and also for significant benefits for cardiovascular function.**

- It aids in the production of collagen and elastin, which is the structure of the body.
- Current clinical evidence suggests that the lack of adequate amounts of vitamin C over a period of years results in a breakdown of the collagen and elastin structure of the blood vessel walls. This breakdown leads to tiny, microscopic cracks or fissures in the walls. Cholesterol globules, surrounded by sticky lipoprotein (a) molecules, lodge in these cracks forming a sort of natural “plaster cast” to prevent blood leakage. This natural repair system eventually overshoots and the buildup of atherosclerotic deposits result. These fat deposits in the arteries of the heart can cause heart attacks and strokes.

**Researchers from the National Institute on Aging reports**

That elderly people who take vitamin C and E supplements have a 50 percent lower risk of dying prematurely from disease than do people who do not supplement. Other researchers have found that people who suffer from asthma, arthritis, cancer, diabetes, and heart disease have much lower levels of vitamin C in their blood than do healthy people.

Daily supplementation with 500 mg or more of vitamin C for 10 years has been found to cut the risk of developing bladder cancer by 60 percent. The spread of breast cancer (metastasis) is now believed to be predominantly due to free radical damage which can be controlled through intake of increased amounts of vitamin C. Supplementation with 3 g/day of vitamin C has been found to effectively prevent further polyp growth in colon cancer and a vitamin C intake of more than 157 mg/day has been found to reduce the risk of developing colon cancer by 50 percent.
C-3000 Complex is a buffered powdered formula that can be mixed into fruit or vegetable juices, water, or applesauce. This complex of different forms of vitamin C helps optimize the body's usage of this nutrient. Ascorbic acid and ascorbic salts are very important along with rose hips, hesperidin, rutin, and acerola concentrate. C-3000 Complex contains all of these along with citrus bioflavonoids which work with vitamin C to increase its biological efficacy in the body.

Processing
On-site laboratories are constantly monitored and tested by expert chemists and microbiologists to ensure consistent quality of raw materials, product batches, and finished products. Analyses are conducted to validate content and specifications, assuring high quality.

No Additives
This product contains no starch, salt, preservatives, artificial colors, flavors or additives, and no corn, wheat, yeast, soy, or milk derivatives.

Manufacturing Standards
MBi Nutraceuticals operates its own manufacturing facility. Our standard operating procedures are based on "Current Good Manufacturing Practices". MBi ensures the highest quality nutraceuticals by applying our manufacturing procedures to every nutritional, herbal, food, homeopathic, and personal care product we make.

Synergistic MBi Products
- Micell-A-25
- Bio-Zn
- Zinc-Silver Lozenges
